

BUSINESS REQUIREMENTS DOCUMENT

L4 Knowledge Transfer & Knowledge Base Solution

Jade Global IT Support Operations

Document Title	L4 Knowledge Transfer & Knowledge Base Solution - BRD
Document ID	BRD-2026-001-L4KT
Version	1.0 - Final
Date	March 17, 2026
Status	Ready for Development
Prepared By	Business Analyst - IT Support Optimization

1. EXECUTIVE SUMMARY

Business Objective: Reduce IT escalations from L1/L2 to L4 by 62% (100→38/month) through formalized Knowledge Transfer (KT) and Knowledge Base (KB) processes.

Current State Gap: 100+ monthly escalations to L4 disrupt strategic work. Root causes: Admin Access Gap (29%), Bug/Technical Issue (24%), Knowledge Gap (23%), Policy Exception (24%). Zoom is the top app by escalation volume (17 of 100 tickets). L4 spends 100-150 hours monthly on escalations.

Proposed Solution: Establish L4 ownership of KT/KB creation post-escalation, expand L2 admin permissions, build centralized knowledge repository, and implement monthly review cycles.

Expected Benefits: 1000+ L4 hours freed annually, improved SLA consistency, enhanced L2 autonomy, better user experience, scalability for future applications.

2. BUSINESS PROBLEM & CONTEXT

2.1 Problem Statement

IT escalations from L1/L2 support to L4 are disrupting high-priority strategic initiatives. Each escalation consumes 1-2 hours of L4 engineer time, accumulating to 100-150 hours monthly. The escalations result from knowledge gaps, missing permissions, and lack of documentation. Analysis shows 52% of escalations are preventable through access provisioning and knowledge transfer.

2.2 Root Causes

- Admin Access Gap (29%): L1/L2 cannot execute self-service tasks
- Bug/Technical Issue (24%): Legitimate L4 complexity; requires technical expertise
- Knowledge Gap (23%): L4 resolves but doesn't transfer knowledge
- Policy Exception (24%): Legitimate governance-driven escalations (not preventable)
- Note: Zoom is the top individual application by escalation volume (17 of 100 tickets, 17%) and cuts across the above reason categories rather than being a separate root cause.

3. FUNCTIONAL REQUIREMENTS

FR-1: Knowledge Base (KB) Management Platform

Requirement: Searchable KB platform (Confluence/SharePoint) where L4 engineers create and maintain articles for resolved escalation issues.

Acceptance Criteria:

- KB articles searchable by app, issue type, keyword; ranked by relevance/recency
- Standard template with: Title, Description, Root Cause, Resolution Steps, Tools, Author, Date
- Links from ServiceNow incidents to relevant KB articles
- Version control and update history tracked
- Role-based access: L1 read-only, L2 read+comment, L4 read+write+delete

FR-2: Knowledge Transfer (KT) Session Recording & Linking

Requirement: Post-escalation, L4 conducts 30-min KT session with L2 team; session recorded and linked in ServiceNow incident record.

Acceptance Criteria:

- Zoom/Teams recording capability for KT sessions
- Recording linked in ServiceNow (custom field: 'KT_Recording_URL')
- Recording title format: '[App] - [Issue Type] - KT Session - [Date]'
- Recordings accessible to L1/L2 team via KB portal
- L2 confirmation of attendance logged in ServiceNow

4. USE CASES

UC-1: L4 Creates KB & Conducts KT Post-Escalation

Actor: L4 Engineer | **Trigger:** Escalation resolved | **Outcome:** KB article + KT session

Flow:

1. L4 resolves escalated ticket in ServiceNow
2. L4 clicks 'Create KB Article' – fills template
3. L4 schedules 30-min KT session with L2 team (Zoom) – records session
4. L4 links KB article URL and recording URL in ServiceNow incident
5. L2 team receives notification, reviews KB article and recording

UC-2: L2 Self-Resolves Using KB & Delegated Access

Actor: L2 Support Engineer | **Trigger:** New incident received | **Outcome:** Resolved without escalation

Flow:

6. L2 receives ticket (e.g., Zoom user permission issue)
7. L2 searches KB: 'Zoom permissions' – finds relevant article with steps
8. L2 follows runbook steps using delegated admin access
9. L2 resolves ticket in ServiceNow, closes without escalation
10. Self-resolution tracked in dashboard for metrics

5. SUCCESS CRITERIA & KPIS

KPI	Baseline	Target (12 mo)	Measurement
Monthly Escalations	100	38	ServiceNow dashboard
Admin Gap Escalations	29	10	Escalation reason tag
L2 Self-Resolve Rate	62%	85%+	Resolved without escalation
Avg Resolution Time	8.7 hrs	5.2 hrs	ServiceNow SLA tracking
KB Articles	Minimal	50+	KB platform count
KB Adoption	-	200+ searches/mo	KB search analytics
KT Attendance	-	90%+ L2	Meeting logs
SLA Performance	95.73%	98%+	ServiceNow reporting
L4 Hours Freed	0	83/mo	Time tracking
Knowledge Base Coverage	Minimal	Top 50 issues documented	KB audit
Zoom Escalation Reduction	17	7	Escalation metrics

6. IMPLEMENTATION ROADMAP (8 Weeks)

Phase	Week	Deliverables	Owner	Success Criteria
Planning	1-2	Kickoff, KB platform selection, access audit	PM + L4	Director approval
Access	3-4	RBA provisioning, governance policies	IT Ops + L4	10 L2 with delegated admin
KB Setup	2-3	KB platform live, templates, ServiceNow integration	BI + IT Ops	Platform ready
Zoom Focus	2-3	Zoom runbook, L1/L2 workshop, super user	L4 Expert	90%+ training
KB Population	4-6	Top 50 KB articles from history + new	L4 Team	50 articles published
Training	5-7	KB orientation, KT process, dashboard training	L4 + L2	100% L1/L2 trained
Monitoring	7-8	Dashboard setup, first review meeting	BI + L4	Dashboard live

7. RISK & MITIGATION

Risk	Probability	Impact	Mitigation Strategy
L4 resists KB/KT workload	Medium	High	Include in workload, performance recognition
Low L2 KB adoption	Medium	High	Mandatory training, incentives, mentorship
KB articles become outdated	Medium	Medium	Quarterly review, monthly audit
Zoom runbook insufficient	Low	Medium	Iterative updates, 30-day L4 review
ServiceNow integration fails	Low	High	Early testing, backup manual process
Access security issues	Low	High	Audit trail enabled, quarterly review
SLA targets not met	Medium	High	Milestone reviews (M3/M6/M9)
API limitations	Low	Medium	Early assessment, vendor engagement

8. APPENDICES

A. Assumptions

- KB platform (Confluence/SharePoint) available or provisioned within 2 weeks
- L4 team capacity available for KT sessions (post-solution: 65-70% utilization)
- ServiceNow API access available for KB incident linking
- IT leadership prioritizes escalation reduction and provides stakeholder support
- Zoom/Box/Figma/Smartsheet API access available for RBA provisioning

B. Dependencies

- ServiceNow configuration changes (custom KB field, incident template updates)
- Zoom/Box/Figma/Smartsheet admin portal RBA provisioning
- Confluence/SharePoint KB platform setup
- IT Ops support for access provisioning and testing
- BI Team support for dashboard development and automation

C. Stakeholders

Sponsors: IT Director, VP IT Operations

Project Manager: Business Analyst

Implementers: L4 Lead, L2 Manager, IT Ops, BI Team

Users: L1 Support (read), L2 Support (read+comment), L4 Engineers (read+write+delete)
